

SUCCESS STORY OF SRI PARSURAM KANDI, KANTAPADA, CUTTACK

Adress

Sri Parsuram Kandi
Village- Allapur
Po - Kantapada
Block – Kantapada
District- Cuttack

The pilot project, CRP is widely accepted by the dairy farmers. It will definitely relieve some pain from the high feed cost of dairy farmers. Reach protein feed is a highly essential to develop a cow from a calf. Genetic potential of the animal can only be expressed in high nutritional status. Sometimes high genetic potential can be suppressed in deficiency nutritional status. The most of dairy farmers in Kantapada Block are interested to be a part of this programme. Especially this is a boon for the poor landless dairy farmers like Parsuram Kandi of village Allapur Po- Kantapada, Block Kantapada of Dist Cuttack.

He is landless scheduled caste day labourer. He got a CB Female calf from an indigenous cow through A.I. on 14.07.2010. The calf has been booked under Calf Rearing Scheme. He received the feed and mineral mixture for his calf in this programme. The health of the calf has been checked periodically. As on today the calf has already developed the symptom of estrus (Silent) once. No doubt it will be a mother within two and half years or less which will be a earning source of income for Parsuram and be a asset to the nation. In addition to that he is lucky enough to have another CB female calf from the Indigenous cow on 24.09.2011. I feel through this programme I am able to help such people like Parsuram to see a smile on his face which is as good as to be near to the God for me.
